## What is an SBO?

The Sample Based Observation (SBO) is an election observation activity conducted by e-CARD using statistics to collect information concerning the entire process of Election Day implementation.

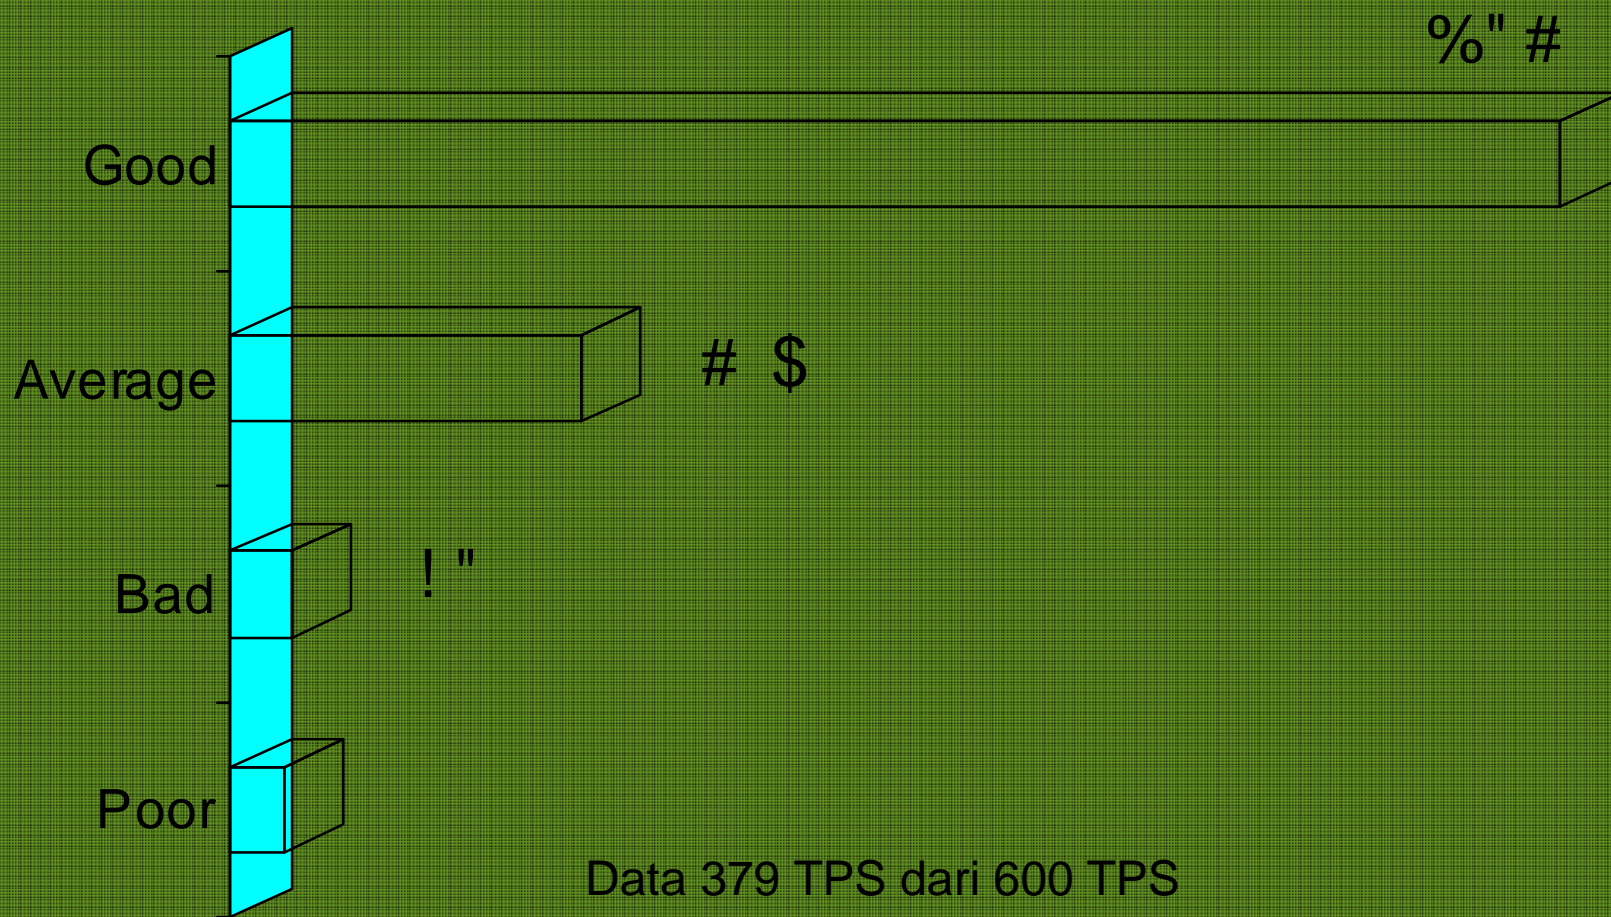

## Methodology

- Sample: 600 polling stations selected randomly in 23 districts/ cities in Aceh
- Margin of error  $\pm 2\%$  with a level of confidence 95 percent.
- Sample selected through Cluster Random Sampling
- Each volunteer (more than 700 in total) observed the entire election process from the opening of the polling station until the end of the vote count.
